

# eFLOW BETWEEN ECONOMIC SYSTEMS SOFTWARE

*A New Advancement in Strategic Finance & Accounting Software*

eFlow is pleased to introduce for license or sale revolutionary new advancements in economic theories and methods that are easily understood by the average person. The invention, briefly shown here, provides mathematical equations that can be used to describe spontaneous and direct relationship between closed and open economic system. It takes into account the need for tracking critical variables such as assets, liabilities, income revenue, expenses and ultimately profit and loss of any business or similar organization.

Current accounting systems are hard to understand and involve mathematics that is relatively abstract and often difficult to comprehend for the average person.

The need for a better and easily understood accounting method led inventor Tim Hung-Minh Nguyen to the development of his *eFlow between Economic Systems* – a universal language in mathematics that makes it simple and easy to use and to understand by anyone from corporate executives to a household with the need to create a family budget.

For an analogy, this system makes advancements in finance & accounting with important similarities to Newton's  $F=ma$  or Einstein's  $E=mc^2$ . This finance system provides a flow of mathematical information that can be used by everyone from those controlling the family budget to small and large corporations, schools, governments, banks and other financial institutions.

## *Sales Potential*

Once introduced to the accounting and software industry acceptance should be immediate and enthusiastic. Marketing will be easy as it can be offered everywhere from universities and technical colleges to home/office supply outlets. In addition it can be clearly offered in industry catalogues and appropriate magazines. eFlow between Economic Systems is an education mathematical system with unlimited national and international profit potential.

## *Commentary*

eFlow is excited about the advancement in economic sciences in strategic finance & accounting for personal, corporate, institutions, governments, which afforded by this new invention. It has virtually no competition thereby opening up new profit horizons in countless applications. For the right finance and accounting software that you and Application Company may potentially gain unlimited profit.
